1 Objective

Here I work with **AT&T Database of Faces**. The dataset was developed between April 1992 and April 1994 at AT&T Laboratories Cambridge.

♠ Key features of the dataset are as follows :

- **Subjects** : 40 distinct individuals.
- **Images per Subject** : 10 images, totaling 400 grayscale images.
- **Image Format** : PGM (Portable GrayMap).
- **Resolution** : 112×92 pixels.
- **Variations** : Images capture differences in lighting, facial expressions (e.g., open/closed eyes, smiling/not smiling), and facial details (e.g., with/without glasses).
- **Background and Pose** : Subjects are photographed against a dark, homogeneous background in an upright, frontal position, allowing for some side movement.

♠ I applied Principal Component Analysis (PCA) to the AT&T Database of Faces to reduce the high-dimensional image data into a lower-dimensional feature space while preserving the most significant components, often referred as **Eigenfaces**.

2 Necessary Installations and Imports

```
[ ]: !pip install cupy-cuda12x --upgrade
```

```
Requirement already satisfied: cupy-cuda12x in /usr/local/lib/python3.11/dist-packages (13.3.0)
Collecting cupy-cuda12x
  Downloading cupy_cuda12x-13.4.1-cp311-cp311-manylinux2014_x86_64.whl.metadata (2.6 kB)
Requirement already satisfied: numpy<2.3,>=1.22 in /usr/local/lib/python3.11/dist-packages (from cupy-cuda12x) (2.0.2)
Requirement already satisfied: fastrlock>=0.5 in /usr/local/lib/python3.11/dist-packages (from cupy-cuda12x) (0.8.3)
Downloading cupy_cuda12x-13.4.1-cp311-cp311-manylinux2014_x86_64.whl (105.4 MB)
105.4/105.4 MB
8.9 MB/s eta 0:00:00
Installing collected packages: cupy-cuda12x
  Attempting uninstall: cupy-cuda12x
    Found existing installation: cupy-cuda12x 13.3.0
    Uninstalling cupy-cuda12x-13.3.0:
      Successfully uninstalled cupy-cuda12x-13.3.0
Successfully installed cupy-cuda12x-13.4.1
```

```
[1]: import cupy as cp

# Get GPU device properties
```

```

device = cp.cuda.Device(0)
props = device.attributes # Get all attributes

print(f"CuPy version: {cp.__version__}")
print(f"GPU detected: {cp.cuda.is_available()}")
print(f"Device name: Tesla T4") # We know this from nvidia-smi
print(f"Total memory: {device.mem_info[1]/1024**3:.2f} GB")

```

```

CuPy version: 13.3.0
GPU detected: True
Device name: Tesla T4
Total memory: 14.74 GB

```

```

[2]: from PIL import Image

from matplotlib import pyplot as plt

import requests
from io import BytesIO

import numpy as np
import cupy as cp

import pandas as pd

```

3 Hovering over the data

```

[3]: def face_show(subject_number) :

    base_url = f"https://github.com/sakunisgithub/data_sets/raw/refs/heads/
↳master/AT&T%20Database%20of%20Faces/s{subject_number}/"

    fig, axes = plt.subplots(1, 10, figsize = (15, 2))

    for i, ax in enumerate(axes.flat) :

        img_url = base_url + f"{i+1}.pgm" # this is the full Raw url

        response = requests.get(img_url) # sends an web request to the url,
↳response.content has the raw bytes fetched from the url

        img = Image.open(BytesIO(response.content))
        # BytesIO creates a temporary file from the bytes, here in our case an
↳image file, Image.open() read it as if it were a local file image

        ax.imshow(img, cmap = "gray")
        ax.axis('off')

```

```
fig.suptitle(f"Subject {subject_number}")

plt.show()
```

```
[4]: sub_num = int(input("Enter Subject Number(1 to 40) = "))

print("\n")

face_show(sub_num)
```

Enter Subject Number(1 to 40) = 1

4 Creating the Data-matrix

```
[5]: X = np.empty((400, 112*92))
```

```
[6]: for subject in range(40) :

    base_url = f"https://raw.githubusercontent.com/sakunisgithub/data_sets/
    ↪master/AT&T%20Database%20of%20Faces/s{subject + 1}/"

    for image in range(10) :

        img_url = base_url + f"{image + 1}.pgm"

        response = requests.get(img_url)

        img = Image.open(BytesIO(response.content))

        img_pixel = np.array(img).flatten()

        X[subject * 10 + image] = img_pixel
```

```
[7]: print(X.shape)
```

(400, 10304)

5 Recreating Images (just to be sure everything has gone perfect)

```
[8]: def recreate_image(num) :  
      img = X[num - 1].reshape(112, 92) # original images were of size 112 X 92  
  
      plt.imshow(img, cmap = "gray")  
      plt.axis('off')  
      plt.title(f"Image {num}")  
      plt.show()
```

```
[9]: img_num = int(input("Enter image number (1 to 400) = "))  
  
      print("\n")  
  
      recreate_image(img_num)
```

Enter image number (1 to 400) = 1

Image 1

6 Standardizing the columns (*i.e.* the features) of X

```
[10]: colmeans_X = np.mean(X, axis = 0)
      colstds_X = np.std(X, axis = 0)

      X_new = (X - colmeans_X) / colstds_X
```

```
[11]: print(X_new[0:5, 0:5])

[[-1.05125993 -1.02502268 -1.15078496 -1.08838219 -1.03953452]
 [-0.71590752 -0.71676625 -0.67275578 -0.92031391 -1.06762056]
 [-1.30277423 -1.16513923 -0.92583005 -1.368496   -0.70250205]
 [-0.63206942 -0.91292943 -1.4319786  -1.39650738 -1.48891115]
 [-0.60412339 -0.26839327 -0.16660723 -0.92031391 -1.46082511]]
```

```
[12]: # checking
      np.where(np.round(np.mean(X_new, axis = 0), 0) != 0)
```

```
[12]: (array([], dtype=int64),)
```

7 Calculating the Variance-Covariance Matrix

```
[13]: S = np.dot(X_new.T, X_new) / X_new.shape[0]
```

```
[14]: print(S.shape)
```

```
(10304, 10304)
```

```
[15]: print(S[0:5, 0:5])

[[1.          0.99357094 0.9924485  0.99220946 0.98955615]
 [0.99357094 1.          0.9934313  0.99411065 0.99084667]
 [0.9924485  0.9934313  1.          0.99330042 0.99194717]
 [0.99220946 0.99411065 0.99330042 1.          0.99278621]
 [0.98955615 0.99084667 0.99194717 0.99278621 1.          ]]
```

8 Eigenvalues and Eigenvectors of S

```
[16]: cp_S = cp.array(S, dtype = cp.float64)

      cp_eigvals, cp_eigvecs = cp.linalg.eigh(cp_S)
```

```
[17]: eigenvalues, eigenvectors = cp.asnumpy(cp_eigvals), cp.asnumpy(cp_eigvecs)
```

```
[18]: eigenvalues = eigenvalues[::-1] # sorting in descending order
      eigenvectors = eigenvectors[:, ::-1] # adjusting the eigenvectors accordingly
```

```
[19]: print(eigenvalues[0:10])
```

```
[1658.61395752 1289.0473579  837.63556809  592.07810867  520.94184701
 315.80040416  245.48252803  224.87520865  213.65229232  200.16023089]
```

```
[20]: print(eigenvectors.shape)
```

```
(10304, 10304)
```

```
[21]: # top 300 eigenvalues
top_eigenvalues = eigenvalues[0:300]
print(top_eigenvalues.shape)

top_eigenvectors = eigenvectors[:, :300]
print(top_eigenvectors.shape)
```

```
(300,)
```

```
(10304, 300)
```

These 300 eigenvectors can be treated as **eigenfaces**.

9 Eigenfaces

Let us see first 20 eigenfaces.

```
[22]: fig, axes = plt.subplots(5, 4, figsize = (12, 12))

for i, ax in enumerate(axes.flat) :
    ax.imshow(top_eigenvectors[:, i].reshape(112, 92).real, cmap = "gray")
    ax.axis('off')
    ax.set_title(f"eigenface {i+1}")

fig.suptitle("Top 20 Eigenfaces")

plt.show()
```

Top 20 Eigenfaces

10 Transformed Data

```
[23]: X_transformed = np.dot(X_new, top_eigenvectors)
```

11 Reconstruction and Comparison

Now we shall try to reconstruct the images using these eigenfaces.

11.1 Reconstruction

```
[24]: def reconstruct(img_num, k) :  
  
    """  
    img_num is the image number we want to reconstruct  
  
    k denotes we want to use top k eigenvectors  
    """  
  
    reconstructed = np.dot(top_eigenvectors[:, :k].real, X_transformed[(img_num-  
↪ 1), :k].real).flatten()  
  
    reconstructed_and_unstandardized = reconstructed * colstds_X + colmeans_X  
  
    plt.imshow(reconstructed_and_unstandardized.reshape(112, 92), cmap = "gray")  
  
    plt.axis('off')  
  
    plt.title(f"Image {img_num} : Reconstructed with k = {k}")  
  
    plt.show()  
  
[25]: img_num = int(input("Enter the image you want to reconstruct (1 to 400) = "))  
    k = int(input("How many top eigenvectors do you want to use ? (1 to 300) = "))  
  
    print("\n")  
  
    reconstruct(img_num, k)
```

Enter the image you want to reconstruct (1 to 400) = 1

How many top eigenvectors do you want to use ? (1 to 300) = 300

Image 1 : Reconstructed with $k = 300$

11.2 Visualizing the Reconstruction

```
[26]: def visualize_reconstruction(img_num) :  
  
    fig, axes = plt.subplots(6, 5, figsize = (20, 20))  
  
    for i, ax in enumerate(axes.flat) :  
  
        reconstructed = np.dot(top_eigenvectors[:, :(i*10)].real,   
↪X_transformed[(img_num - 1), :(i*10)].real).flatten()  
  
        reconstructed_and_unstandardized = reconstructed * colstds_X +   
↪colmeans_X  
  
        ax.imshow(reconstructed_and_unstandardized.reshape(112, 92), cmap =   
↪"gray")  
  
        ax.axis('off')  
  
        ax.set_title(f"k = {(i+1)*10}")  
  
    fig.suptitle("Step-by-step Reconstruction")
```

```
plt.show()
```

```
[27]: img_num = int(input("Enter the image you want to visualize reconstruction of (1_  
    ↳to 400) = "))
```

```
visualize_reconstruction(img_num)
```

Enter the image you want to visualize reconstruction of (1 to 400) = 1

Step-by-step Reconstruction

11.3 Comparison

```
[28]: def comparison(img_num) :  
  
    fig, axes = plt.subplots(1, 2)  
  
    axes[0].imshow(X[img_num - 1].reshape(112, 92), cmap = "gray")  
    axes[0].axis('off')  
    axes[0].set_title("True Image")  
  
    reconstructed = np.dot(top_eigenvectors[:, :300].real,   
↪X_transformed[(img_num - 1), :300].real).flatten()  
    reconstructed_and_unstandardized = reconstructed * colstds_X + colmeans_X  
    axes[1].imshow(reconstructed_and_unstandardized.reshape(112, 92), cmap =   
↪"gray")  
    axes[1].axis('off')  
    axes[1].set_title("Reconstructed Image")  
  
    fig.suptitle(f"Comparison of Image {img_num}")  
  
    plt.show()  
  
[29]: img_num = int(input("Enter the image that you want to compare (1 to 400) = "))  
  
    comparison(img_num)
```

Enter the image that you want to compare (1 to 400) = 1

Comparison of Image 1

True Image

Reconstructed Image

12 What we achieved ?

```
[30]: print(f"Shape of our original data was {X.shape}.")
```

Shape of our original data was (400, 10304).

```
[31]: print(f"Shape of our transformed data is {X_transformed.shape}.")
```

Shape of our transformed data is (400, 300).

That's hell of a compression !! Wooooooo !!
